Company Philosophy

Spectra is a custom engineering, design, and consultation company of high quality audiovisual systems, control, and distribution.
A step beyond the typical stereo or home theater, our systems integrate lighting control, shade control, and HVAC. We provide custom tailored remote control programming, from wirless touchscreens to wiring infrastructure.
Each client, whether commercial or residential, receives a fully customized set of audiovisual drawings, point to point wiring schematics, cable termination schedules, and all other specifications necessary for coordinating with the client, construction team, and architect.
Our reputation is built on service, and our client base is generated through referrals or repeat customers. Long term service and support is fundamental to a Spectra system.
