

Future Home

Company Philosophy

Future Home's principal, Murray Kunis, is an experienced music engineer with a degree in music and electrical engineering. He, along with eight other technicians onstaff, is a CEDIA-certified designer (the industry's top certification). Each system is personally reviewed and specified by Murray to insure the best solution. Over 25 years of electronic system design, numerous industry certifications, published interviews and awards. Future Home will custom create your system after a thorough understanding of your unique requirements. Please note that no two Future Home projects are exactly alike. There is no one-size-fits-all package. Often one of the early questions is "How much does one of these theaters cost?" Only after reviewing your unique situation can we provide the appropriate solution and budget range.
